Australian Gross Domestic Product 1788-1860

Notes

- (1) The estimation procedure basically follows that of ADP omitting the imputed value of livestock increase.
- (2) The aggregate includes all settlements and colonies.
- (3) In the separate component columns, Western Australia is omitted, appearing only as part of the aggregate column.
- (4) For methods of estimation and sources of each component, see individual colony tabulations.
- (5) Coverage of component columns:

Col A: Includes all farming other than pastoral together with forestry, fisheries, quarrying and coal mining netted for intermediate purchases other than transport which is treated as farmer operated.

Col B: Includes wool exports and carcase products of sheep, cattle and pigs; omits wildlife capture and imputed value of livestock increase. Gross output netted for selling commissions and ocean transport but not internal transport.

Col C: Includes manufacturing other than those so-described as predominantly selling outlets (retail and wholesale), ship building and private construction, netted for intermediate purchases other than land transport. Private construction is derived from estimating private capital formation converted from an expenditure to a product concept and including farm formation which was inextricably mixed with much materials production.

Col D: Commercial services estimated as in ADP treating output flows for final consumption plus all imports as price inputs into commercial operations. Export disposal is assumed to attract foreign commercial services off-shore. A changing mark-up is used according to colony and time, with the purchase of government transactions influencing the level of mark-up.

Col E: Personal and Other Services omits all transport services not netted

from other columns and excludes all government services. The primary component is domestic service but others - professional, financial, lodging etc - are substantial for most years after 1800.

Col F: Imputed House Rents are as in ADP subject to the non-deduction for

rates for most of the period.

Col G: Public Services and Construction include the wages and salaries and

allowances of those persons to whom a formal wage or salary was accorded. This includes some unfree persons (e.g. paid ticket-of-leave guards) but does not include the mass of convicts. Most convicts were assigned to private service. Where convicts were employed by government in primary industry, mining etc, their product is incorporated in those columns. For the rest, convict product is estimated in public capital formation as stated by public accounts and the expenditure concept converted to a product concept.

Col H: Mining includes only gold mining and other South Australian mining.

Gold is estimated from exports net escort values and netted for escort charges, merchants' and other commissions supplemented by estimated amounts carried away by individuals.

TABLE 2.

NEW SOUTH WALES GROSS DOMESTIC PRODUCT 1788 TO 1860,
