

EMET2007

Econometrics I: Econometric Methods

This course provides an introduction to econometric methods and their applications. The main workhorse of applied econometrics is the linear regression model and the course will develop its theory and look at a wide range of applications. The course emphasizes intuitive and conceptual understanding as well as hands on econometric analysis using modern computer software on data sets from economics and business. Students learn how to conduct empirical studies, as well as how to analyze and interpret results from other empirical works. We cover a broad range of topics, including: brief review of basic statistics; ordinary least squares estimation and its properties; choice of functional form; departures from standard OLS assumptions; time series analysis.

This is a hands-on course with a focus on applications in economics as well as business. A standard statistical software will be used during computer sessions, no special programming skills are required.

Mode of Delivery	On campus
Prerequisites	completed or currently enrolled in ECON1101 completed EMET1001 completed either STAT1008 or STAT2001
Course Convener	Juergen Meinecke
Phone:	56184
Email:	juergen.meinecke@anu.edu.au
Office hours for student consultation:	Tue 1:00-2:30
Research Interests	Econometrics, computational things
Student administrator	Nicole Millar
Phone:	50384
Email:	enquiries.rse@anu.edu.au

COURSE OVERVIEW

Learning Outcomes

Upon successful completion of the requirements for this course, students will

- understand and appreciate the challenges of empirical modelling in economics and business;
- have a deep knowledge of regression analysis (including statistical foundations, underlying assumptions, properties, extensions, limitations);
- understand econometric methods relevant for analyzing data used in economics and business;
- be able to use econometric software to conduct regression analysis on actual data sets;
- be able to interpret and critically evaluate the results of empirical analysis;
- be able to read and understand academic journal articles that make use of the concepts and methods that are introduced in the course;
- be able to independently conduct small scale empirical research and write up results;
- be able to think clearly about the relationship between data, model and estimation in econometrics.

Assessment Summary

Assessment Task	Value	Due Date	Date for Return to Students
1. Assignment 1	10%	28 March	Week 7 (in tutorials)
2. Assignment 2	10%	16 May	Week 12 (in tutorials)
3. Participation	10%	Weeks 2-11	Week 12 (on Wattle)
4. Final Exam	70%		

Research-Led Teaching

This course teaches state-of-the-art methods and practices in econometrics. We will use applications and data sets from recently published papers in top academic journals.

Feedback

Staff Feedback

Students will be given feedback in the following forms in this course:

- Solution suggestions of past exams will be offered.
- Verbal feedback will be given in the computer tutorials.
- Written comments, if necessary, will be included in assignments returned to students.
- Verbal comments, if necessary, will be provided during consultation.

Student Feedback

ANU is committed to the demonstration of educational excellence and regularly seeks feedback from students. One of the key formal ways students have to provide feedback is through Student Experience of Learning Support (SELS) surveys. The feedback given in these surveys is anonymous and provides the Colleges, University Education Committee and Academic Board with opportunities to recognise excellent teaching, and opportunities for improvement.

For more information on student surveys at ANU and reports on the feedback provided on ANU courses, go to

[http : //unistats.anu.edu.au/surveys/selt/students/](http://unistats.anu.edu.au/surveys/selt/students/) and
[http : //unistats.anu.edu.au/surveys/selt/results/learning/](http://unistats.anu.edu.au/surveys/selt/results/learning/)

Policies

ANU has educational policies, procedures and guidelines, which are designed to ensure that staff and students are aware of the Universitys academic standards, and implement them. You can find the Universitys education policies and an explanatory glossary at: [http : //policies.anu.edu.au/](http://policies.anu.edu.au/)

Students are expected to have read the [Academic Misconduct Rule](#) before the commencement of their course.

Other key policies include:

- Student Assessment (Coursework)
- Student Surveys and Evaluations

Required Resources

Textbook

The textbook for the course is *Introduction to Econometrics* (updated third edition, 2014) by Stock and Watson. Chiefly library has several copies of the textbook. I strongly recommend that you buy a copy of the book as I base the lecture and practice sessions on it.

Other excellent textbooks include *A Guide to Modern Econometrics* by Verbeek and *Introductory Econometrics: A Modern Approach* 5ed, by Wooldridge. (There is no need to buy these, however.)

Software

The econometric software for this course is “Stata” Here’s a quick wiki summary of what Stata is: [http : //en.wikipedia.org/wiki/Stata](http://en.wikipedia.org/wiki/Stata). From my own experience, Stata is an exhaustive, well-documented, powerful and user-friendly statistical software. We will get to know Stata during the tutorial in a “learning-by-doing manner” Stata is available in the ANU computer labs. You do not need to purchase your own Stata license.

Examination material or equipment

None permitted

COURSE SCHEDULE

Week	Summary of Activities	Assessment
1	Introduction, Review of Statistics	
2	Review of Statistics	
3	Principles of Econometric Modelling	
4	Simple Linear Regression Model	
5	Simple Linear Regression Model	
6	Simple Linear Regression Model	Assignment 1
7	Multiple Linear Regression Model	
8	Multiple Linear Regression Model	
9	Extensions of the Regression Model	
10	Time Series Regression Models	
11	Time Series Regression Models	Assignment 2
12	Wrap up and Conclusion	
	Examination Period	Final Exam

ASSESSMENT REQUIREMENTS

Assessment Tasks

Participation

Your participation is an essential part in the overall learning experience (both for you as well as your classmates!) in the course. I will evaluate you on your participation during the computer tutorial sessions. By participation I specifically mean:

- answering questions
- asking relevant and helpful questions

Feel free to participate and contribute to these sessions. Do not be afraid to give 'wrong' answers; as long as you are constructively engaged, there is no such thing as a wrong answer. After every tutorial your tutor will take note of students who participated in class and at the end of the semester I will aggregate these numbers to an overall participation mark. Roughly, I will give 10 marks to regular participators, 5 marks to occasional participators and zero marks to students who rarely or never participate. Feel free to seek feedback from me or your tutor during the semester on your participation performance.

Do not confuse participation with attendance! In order to participate, you do need to attend. But in addition you also need to contribute to the tutorial discussion. (Attendance is necessary but not sufficient for participation.)

Assignments

Working through exercises is an effective method of learning econometrics, as it is with most mathematical subjects. That means that the assignments are more than simply part of the assessment for the course. Students will be required to submit two written assignments during the semester. The assignments will require computer work as well as analytical work. These assignments should be your own work. You may discuss assignments with classmates, but you should do all your own

computing and writing of the assignments. It is an offense against the University's regulations to copy from other students' assignments.

Assignments should be submitted in hard copy by dropping them into a specially labeled assignment box at the Research School of Economics. (Contact the Student Administrator for details.) The front page of the submitted assignments must show your name, student number and the course name (EMET2007/4007/6007). Assignments missing any of this information will receive a mark of zero.

Assignments must be submitted by 12pm (which means noon or midday) on the due date. Further details about assignment submission will be given during lectures.

Extensions for Assignments

No submission of assignments without an extension after the due date will be permitted. If an assessment task is not submitted by the due date, a mark of 0 will be awarded.

Returning Assignments

Assignments will be returned to you during the tutorial.

Resubmission of Assignments

Resubmission of assignments is not permitted.

Final Examination

The final exam is compulsory. Examinable material covers the whole semester. The exam will be marked out of 100.

The final exam will be held in the exam period at the end of the semester. Details will be posted on the ANU exam timetable site.

Scaling

Your final mark for the course will be based on the **raw** marks allocated for each of your assessment items. However, your final mark may not be the same number as produced by that formula, as marks may be **scaled**. Any scaling applied will preserve the rank order of raw marks (i.e. if your raw mark exceeds that of another student, then your scaled mark will exceed the scaled mark of that student), and may be either up or down.

Class Meeting Times

There will be a two-hour lecture, a one-hour problem solving tutorial and a one-hour computer tutorial per week. (Both types of tutorials start in week 2.)

Lectures

Although you do not have to attend lectures, I encourage you to do so. It is nicer for me to see some students and it is also more social.

Lectures will be held in the following venue at the following time:

Day	Tuesday
Time	15-17
Location	Law T

Problem Solving Tutorial

A large-group tutorial, the problem solving tutorial is an integral part of this course. Each week I will post a set of problem solving exercises that go hand in hand with the lecture material. We will work through the exercises together during this tutorial.

Day	Thursday
Time	14-15
Location	R N Robertson T

Computer Tutorials

We will offer a number of computer tutorials each week. The computer tutorials are another important part of this course. These tutorials are held in small groups, some details here:

Days	Thursday or Friday
Time	varies
Location	Computer labs

Your tutor will develop and present solutions to selected exercises *in cooperation* with you and your classmates. Solutions will not be made available in any other form.

Digital Lecture Delivery

We will record (both audio and visual) the lecture and the problem solving tutorial and post the resulting files on Wattle (the recordings are the only course content that I post there).

The computer tutorial sessions will not be available on Wattle (they are group learning sessions and as such do not lend themselves to audio recordings).

Privacy Notice

The ANU has made a number of third party, online, databases available for students to use. Use of each online database is conditional on student end users first agreeing to the database licensors

terms of service and/or privacy policy. Students should read these carefully.

In some cases student end users will be required to register an account with the database licensor and submit personal information, including their: first name; last name; ANU email address; and other information.

In cases where student end users are asked to submit content to a database, such as an assignment or short answers, the database licensor may only use the students content in accordance with the terms of service including any (copyright) licence the student grants to the database licensor.

Any personal information or content a student submits may be stored by the licensor, potentially offshore, and will be used to process the database service in accordance with the licensors terms of service and/or privacy policy.

If any student chooses not to agree to the database licensors terms of service or privacy policy, the student will not be able to access and use the database. In these circumstances students should contact their lecturer to enquire about alternative arrangements that are available.

Tutorial Seminar Registration

Tutorial signup for this course will be done via the Wattle website. Detailed information about signup times will be provided on Wattle or during your first lecture. When tutorials are available for enrolment, follow these steps:

1. Log on to Wattle, and go to the course site
2. Click on the link 'Tutorial enrolment'
3. On the right of the screen, click on the tab 'Become Member of' for the tutorial class you wish to enter
4. Confirm your choice

If you need to change your enrolment, you will be able to do so by clicking on the tab 'Leave group. . . .' and then re-enrol in another group. You will not be able to enrol in groups that have reached their maximum number. Please note that enrolment in ISIS must be finalised for you to have access to Wattle.

SUPPORT FOR STUDENTS

The University offers a number of support services for students. Information on these is available online from [http : //students.anu.edu.au/studentlife/](http://students.anu.edu.au/studentlife/)
